

Onfleet

Organisation: Onfleet

Geographical scope: International

Target users: Delivery services, retailers, food businesses and producer organisations.

Overview

Onfleet is a delivery management platform providing end-to-end coordination of last-mile logistics through route optimisation, driver management and real-time customer communication.

Main functionalities

- Route optimisation;
- Driver dispatch;
- Real-time GPS tracking;
- Customer notifications;
- Proof of delivery;
- Delivery analytics;
- API integration.

Contribution to biodiversity-based food marketing

Onfleet improves the reliability and efficiency of deliveries, which is particularly important for fresh biodiversity-based products distributed through local and regional supply chains.

Strengths

- Comprehensive logistics management;
- Real-time visibility;
- Strong customer communication tools;
- Scalable solution.

Limitations

Designed for organisations operating regular delivery services and therefore less suitable for occasional direct sales.
